LD30CNBI10BPxxIO - IO-Link

Photoelectric Time Of Flight Sensors with IO-Link communication

Description

The LD30CNBI10BPxxIO sensor family comes in a compact 10 x 30 x 20 mm ABS housing.
They are designed for use in applications where high-accuracy detection as well as small size is required.
Compact housing and high power LED for excellent performance-size ratio.
The compact sensor design is ideally suited to confined spaces.

Benefits

- **Long range Background suppression** TOF (Time of Flight) sensor with IO-Link with a adjustable distance of 50 to 1.000 mm, either by potentiometer or via IO-Link.
- **Infrared laser class 1** assure a reliable detection.
- **Easy customization** to specific OEM requests by use of the build in IO-Link functionalities.
- **The output can be operated** either as a standard switching output or in IO-Link mode.
- **Fully configurable via output IO-Link v 1.1.** Electrical outputs can be configured as PNP / NPN / Push-Pull / External input, normally open or normally closed.
- **Timer functions** can be set, such as ON-delay, Off-delay, and one shots.
- **Logging functions:** Temperatures, detecting counter, power cycles and operating hours.
- **Detection modes** Single point, two point and windows mode.
- **Logic functions:** AND, OR, XOR and Gated SR-FF.
- **Analogue output:** In IO-Link mode the sensor will generate 16 bit analogue process data output representing the distance to the object.
- IO-Link
- LASER 1

Applications

- The sensor has multiple detects functions e.g. in single point mode the presence or absence of objects are detected while cutting off the background information.
- The detection distance is very independent of the colour of the objects to be detected.
- The “analogue” distance from the sensor to the object is available via the IO-Link communication.

Main functions

- The sensor can be operated in IO-Link mode once connected to an IO-Link master or in standard I/O mode.

Adjustable parameters via IO-Link interface:

- Sensing distance and hysteresis.
- Sensing modes: single point or two point or window mode.
- Timer functions, e.g.: On-delay, Off delay, One shot leading edge or trailing edge.
- Logic functions such as: AND, OR, X-OR and SR-FF.
- External input.
- Logging functions: Maximum temperatures, minimum temperatures, operating hours, operating cycles, power cycles, minutes above maximum temperature, minutes below minimum temperature, etc.
- Auto hysteresis
